

Maximum Lifetime Limits of Drugs

Bleomycin	400 units
Daunorubicin	$\leq 550 \text{ mg/m}^2$, or $\leq 400 \text{ mg/m}^2$ for patients who have received mediastinal radiation
Doxorubicin	$\leq 550 \text{ mg/m}^2$, or $\leq 400 \text{ mg/m}^2$ for patients who have received mediastinal radiation or in combination with cyclophosphamide, for patient receiving paclitaxel cumulative doses may need to be limited to the 340-380mg/m ² range.
Doxorubicin, liposomal	Experience with large cumulative doses is limited, so current recommendations are the same as with doxorubicin. $\leq 550 \text{ mg/m}^2$, or $\leq 400 \text{ mg/m}^2$ for patients who have received mediastinal radiation
Epirubicin	$\leq 900 \text{ mg/m}^2$, or $\leq 650 \text{ mg/m}^2$ for patients who have received other anthracyclines
Mitoxantrone	$\leq 140\text{-}160 \text{ mg/m}^2$, or $\leq 100\text{-}200 \text{ mg/m}^2$ for patients who have received other anthracyclines
